Our view The Energy Many types of renewables are intermittent, meaning the UK still needs back-up Challenge energy power, such as gas." We focus our upstream efforts &ecarbonisation on **bringing gas to the UK.** Gas is transportable, remains widely Energy companies available and is the lowest carbon should focus on fossil fuel. As such, it is an essential ensuring we have the **Energy companies** component of a cost effective energy we need should get out of transition to a low carbon future. fossil fuels and into renewable energy How do you reduce carbon from energy In our downstream business, whilst keeping it we focus on **installing energy** affordable and secure? efficiency measures to help reduce consumption, which saves our customers money, emits less carbon and reduces stress on supplies. The UK must achieve carbon targets to reduce CO₂ emissions We should use gas. It's by 80% by 2050, cheaper, heating 80% of even if this means homes at half the cost of higher bills." electricity." Renewable power is £ still more expensive The UK needs to than fossil fuels, so the invest in our energy **Energy companies** UK can't just switch infrastructure now in immediately." should keep bills as order to keep the lights low as possible on in the future." affordability
